

Five Regions Relief

Anthony Hill

Not on display

Title/Description: Five Regions Relief

Artist/Maker: Anthony Hill

Born: 1960 - 1962

Object Type: Relief

Materials: Aluminium, Hardboard, Plastic

Measurements: h. 610 x w. 549 x d. 90 mm

Accession Number: 31193

Historic Period: 20th century

Production Place: Britain, England, Europe

This constructed relief is part of a series that Anthony Hill developed between 1960 and 1962, using eight cuts to divide a grid of twenty-five squares into five 'regions'. In this work, the five regions are set out in white in the front plane of the relief, which is framed by a back layer of black plastic. The five regions are divided by pathways on a middle layer of white plastic, in widths that relate to the aluminium angle sections embedded in the two white planes of the relief. The carefully balanced relationships between the elements and surfaces of the relief change according to the light and the angle from which the work is viewed.

Hill used mathematical formulas to determine different ways of mapping the five regions, the pathways between them and the distribution of aluminium angle sections in this series of works. [1] He was keen to demonstrate the variety that could be achieved within these self-imposed rules, which he hoped would encourage a more precise aesthetic engagement.

Five Regions Relief was first exhibited with four other reliefs from the Five Regions series in Anthony Hill's joint exhibition with Gillian Wise at the ICA in London in 1963. Hill's statement for the exhibition catalogue summarises his key concerns at the time: 'My present interests are in developing an autonomous art expression where the work will function and operate with light, space and movement.' [2]
