

Raku Bowl

Martin Smith

Not on display

Title/Description: Raku Bowl

Artist/Maker: Martin Smith

Born: 1976 c. - 1978 c.

Measurements: h. 125 x d. 305mm

Accession Number: 50564

Historic Period: 20th century

Copyright: © Martin Smith

Credit Line: Donated by a private donor

Martin Smith was introduced to Raku during his studies at Bristol Polytechnic and came to refine his

process at the Royal College of Art. This thrown vessel follows directly on from Smith's RCA graduation exhibition, closing his 2-year research degree. The refined form, crisp geometry and precise execution are typical of Smith's entire oeuvre but, in the context of Raku, mark him out as a visionary that reinvigorated Raku amongst contemporary makers and buyers. [1]

Raku ware is bound up in centuries of Japanese history and tradition, closely linked to Japanese tea ceremony and the customs of Zen Buddhism. The 20th century western Raku process is praised for its spontaneous nature and unpredictable results, often strikingly coloured with random and expressive markings. Contemporary western Raku ware was often described as a pastiche of past Japanese masterpieces [2] but Smith's innovations revived the medium. [3] His ability to execute planned geometric surface decoration with high levels of detail and precision was previously unseen.

Smith enjoyed the speed with which Raku could produce results. [4] Pots are not shut away in a kiln for days but require quick working, even at the molten stages, when the body and glazes are still hot. [5] Despite the spontaneous tendencies in Raku, Smith sought to exert limitations and parameters over the process with the aim to produce specific, precise results. Designs were meticulously planned before firing, masked off with tape and the glaze sprayed on for an even result. Smith would even manipulate the extent to which crazing would occur on the interior glazed surfaces with the application of damp clothes for rapid cooling. He designed a kiln of his own that would fire quicker and did not require pots to be moved for the final reduction process. To achieve the desired levels of precision Smith approached Raku solely as a ceramic technique, removing it entirely from its historic traditions. [6]

Smith reveals his interest in ancient Greek red- and black-figure pottery, often characterised by their pictorial narrative description of historical events and mythical stories around the circumference of a pot. Smith exploited the idea of pictorial story telling through the reduced geometry of the pattern seen here. [7] Referencing Euclidean geometry, a triangle shifts and rotates through space-like frames of a movie, trapping a sense of passing time in the static physical object. [8]

Similarly, Martin Smith was preoccupied with illusions of space in a pictorial context. Inspired by Giotto's barrel-vaulted ceiling at Padua in particular, Smith studied the early mechanics of perspective - the depiction of an imagined three-dimensional space on a physical two-dimensional plane. [9] He exaggerates this through the rendering of an imagined three-dimensional space on an entirely contrasting physical three-dimensional mass. This preoccupation continued in Smith's work even after he moved away from Raku at the end of the 1970s.

These late 1970s Raku bowls also make early reference to key preoccupations with the Vessel, examining the sense and capacity of containment. The Raku bowls have an obvious and recognisable vessel form that the viewer may associate with functional wares. However, at the base of the bowl, Smith begins to challenge the viewer's preconceptions. [10] The slightness of the slope means that contact with the supporting surface is blurred in the shadow of the bowl. The uncertain relationship between the vessel and the surface creates an uneasiness, subverting its 'vessel-ness' and forcing the viewer to look again.
